SAVSPOT

"Find your spot. Book your moment."

Multi-Tenant, AI-Agent-Ready Booking SaaS Platform
for Service Businesses Globally

SD Solutions, LLC | Solo Developer, Bootstrap-Funded

Comprehensive presentation derived from 9 specification documents

March 2026 | v1.2

Document Set Overview

9 interconnected specification documents with 100% cross-reference consistency

BRD v1.2

Business Requirements

Revenue model, business rules, constraints, glossary

PRD v1.1

Product Requirements

All FR codes, phase matrix, MoSCoW priorities

PVD v1.1

Product Vision

Personas, competitive landscape, soft launch strategy

SRS-1 v1.1

Architecture

Tech stack, monorepo, infrastructure, deployment

SRS-2 v1.1

Data Model

40+ DB tables, ERD, API endpoint catalog

SRS-3 v1.1

Booking & Payments

State machines, availability, payment processing

SRS-4 v1.1

Comms & Security

Templates, auth, GDPR, workflow automation

GTM v1.0

Distribution Strategy

Design partner, concierge launch, channels

VAL v1.3

Validation Analysis

Multi-dimensional assessment, risk analysis

1

Vision & Problem

Why the world needs a new booking platform

The Problem

Fragmented, expensive, and AI-hostile booking infrastructure

For Businesses	For Clients	For the Market
Manual booking via phone, WhatsApp, email leads to double-bookings	Booking friction: multiple calls, emails, manual coordination	No AI-native booking platform exists today
No online booking despite having social media presence	Scattered discovery with no consistent booking experience	AI tooling is expanding the population of service businesses
Fragmented tools for scheduling, invoicing, and client management	AI agents cannot book because businesses lack structured APIs	New businesses have no incumbent solution -- greenfield demand
Per-seat pricing ($20-$699/mo) is a barrier for micro-businesses		Per-seat SaaS pricing misaligned with AI agent usage

The Solution: SavSpot

The free booking platform that works for any business in under 5 minutes.

Zero-Config to Live

4 fields + 1 decision to a working booking page with preset defaults

Universal Engine

Serves freelancers through venues with a single codebase -- complexity scales per service, not per tenant

AI-Agent Ready

MCP + structured APIs from day one -- AI agents follow the same rules as humans

Outcome-Aligned

Free core software; revenue from 1% payment processing + platform referral commission

Global by Design

Multi-currency, multi-timezone, GDPR/CCPA compliant, offline payment as first-class path

Secure Multi-Tenant

PostgreSQL RLS + application middleware -- zero cross-tenant data leakage

Target Market

67M+ addressable businesses globally -- and growing

Segment	Examples	Est. Businesses	Priority
Individual Providers	Photographers, consultants, trainers, tutors	~50M globally	Phase 1
Service Businesses	Salons, spas, fitness studios, dental clinics	~15M globally	Phase 1-2
Event Venues	Wedding venues, conference centers, banquet halls	~2M globally	Phase 3+
Co-working & Rentals	Desks, meeting rooms, studio rentals	~500K globally	Phase 4
AI-Enabled New Business	Solo practitioners, creators monetizing services	Expanding	Phase 1+

CORE MARKET THESIS: GREENFIELD > CONVERSION

AI tooling is expanding the population of service businesses. New businesses are easier to win than existing ones -- they have no incumbent to displace, AI-native expectations, and zero-friction price sensitivity. SavSpot is positioned to be the default choice.

User Personas

Four distinct personas spanning greenfield and conversion markets

Maria

38, Venue Owner

PAIN

3+ hrs/day on manual inquiries, quotes, contracts

GOAL

Automate booking pipeline with shareable link

James

29, Photographer

PAIN

Manages bookings via DMs and spreadsheets, loses deposits

GOAL

Professional booking page, auto payment collection

Marcus

32, Barber

PAIN

Frustrated with Booksy's closed ecosystem, no client preference tracking

GOAL

Run SavSpot alongside Booksy, compare, eventually switch

Priya

26, AI-Enabled New Owner

PAIN

Just launched freelance design consultancy using AI tools

GOAL

Zero-friction setup that matches the speed AI helped her start

Competitive Landscape

SavSpot is the only free, universal, AI-ready booking platform

Platform	Pricing	AI-Ready	Universal	Free Core	Offline Pay
SavSpot	Free + 1% txn	Yes (MCP)	Yes	Yes	Yes
Fresha	Free + 20% comm.	No	Beauty only	Partial	No
Mindbody	$139-$699/mo	Limited	Fitness only	No	No
Calendly	Free-$20/seat/mo	No	Meetings only	Partial	N/A
SimplyBook.me	$9.90-$59.90/mo	No	General	No	No
Square Appts	Free + 2.6%/txn	No	General	Partial	Yes
Acuity	Free-$36/mo	No	General	Partial	No

8 Key Differentiators

1 AI-Agent-First

MCP + structured APIs from day one;
agents follow same business rules as humans

2 Universal Engine

All businesses, not niche-locked; salons to venues to photographers

3 Progressive Complexity

Zero-config for freelancers, full-featured
for venues; complexity scales with need

4 Outcome-Aligned Revenue

Revenue from transaction fees, not
subscriptions; zero upfront cost

5 Greenfield-Ready

<5 min to live booking page; designed for first-time business owners

6 Payment Abstraction

Provider-agnostic; Stripe Phase 1, Adyen/PayPal Phase 3, offline always

7 Multi-Tenant by Design

Shared infra, isolated data via PostgreSQL RLS + app middleware

8 Full Lifecycle

Booking > Payment > Contracts > Comms
> CRM > Analytics in one platform

2

Business Model

Revenue streams, pricing tiers, and unit economics

Revenue Model

Three streams aligned with business outcomes -- earn when they earn

Payment Processing

1.0% platform fee on all SavSpot Pay transactions

On top of Stripe's standard fee (~2.9% + $0.30 US). Collected via application_fee_amount.

Every payment

Platform Referral Commission

15-20% of first booking (capped at $500)

One-time fee on bookings from platform-sourced clients:
AI agents, directory, referrals.

First booking
from new client

Premium Features

$9-$49/mo per feature

Advanced widget, custom domain, advanced analytics, workflow automation, API access, accounting.

Monthly
subscription

REVENUE ARITHMETIC

Year 1 base case: $37-54K ($20K processing on $2M GMV + $12-24K premium subscriptions + $5-10K referral). Stretch target: $100K requires >10% premium conversion or >$2M GMV. Positive unit economics at ~$3K/month against bootstrap infrastructure costs.

Subscription Tiers

FREE

$0
forever

- ✓ Booking page (savspot.co/{slug})
- ✓ Full CRM with client management
- ✓ Client portal
- ✓ One-way calendar sync
- ✓ Basic metrics dashboard
- ✓ Basic embed widget (redirect mode)
- ✓ Transactional email (confirmation, reminders)
- ✓ Walk-in booking management
- ✓ Browser push notifications

PREMIUM

$9-49
/mo per feature

- ✓ Embeddable widget (inline/popup modes)
- ✓ Custom domain booking page
- ✓ Advanced analytics & reporting
- ✓ Multi-stage workflow automation
- ✓ API access (headless booking engine)
- ✓ QuickBooks / Xero integration
- ✓ Advanced template customization
- ✓ Priority support

ENTERPRISE

Custom
pricing

- ✓ Multi-location management
- ✓ Dedicated support
- ✓ Custom integrations
- ✓ SLA guarantees
- ✓ Custom onboarding
- ✓ Volume discounts on processing
- ✓ White-label options (future)

3

Architecture & Technology

TypeScript monorepo, NestJS + Prisma + PostgreSQL RLS

Core Technology Stack

TypeScript everywhere -- single language across the entire stack

Layer	Technology	Rationale
Backend	NestJS 11+ + Prisma 6+	Modular DI framework + type-safe ORM with PostgreSQL RLS
Frontend	Next.js 15 (App Router)	RSC, server actions, SSR for booking pages
UI Framework	shadcn/ui + Radix + Tailwind 4	Accessible, composable, utility-first styling
Database	PostgreSQL 16 (RLS)	ACID compliance, RLS for multi-tenancy, full-text search
Cache / Queue	Redis (Upstash) + BullMQ 5	Job processing, caching, session storage
Mobile (Phase 2)	React Native + Expo 54	Code sharing via packages/shared
Auth	Custom NestJS + Passport.js	JWT RS256, OAuth 2.0, API keys
Payments	PaymentProvider abstraction	Stripe Connect (P1), Adyen/PayPal (P3), offline fallback
Monorepo	Turborepo + pnpm	Efficient builds, shared TypeScript packages

System Architecture

High-level infrastructure overview

Cloudflare CDN / DNS / DDoS Protection

Vercel (Next.js)

Admin CRM | Client Portal | Booking Pages
SSR/SSG | React Server Components

Mobile Apps (Phase 2)

React Native + Expo
iOS & Android

Fly.io Platform

NestJS API Server
REST API

PostgreSQL 16
Row-Level Security

Redis (Upstash)
BullMQ Workers

Stripe Connect

Resend (Email)

Twilio (SMS)

Cloudflare R2

Google Calendar

Progressive Complexity Engine

Data presence IS configuration -- no feature flags, no upgrade walls

ZERO-CONFIG FREELANCER

Required: name, service name, duration, price

Booking flow: Date/Time > Payment > Confirmation

- Preset defaults: Mon-Fri 9-5, auto-confirm
- No guests, no contracts, no intake forms
- Flat FIXED pricing
- All advanced UI sections hidden

FULLY-CONFIGURED VENUE

Same codebase, same schema, different data

Flow: Service > Venue > Date > Guests > Questionnaire > Add-ons > Pricing > Contract > Payment > Confirmation

- TIERED pricing with age-range tiers
- Guest tracking, intake forms, contracts
- Manual approval, deposit payments

Field	Type	When NULL	When Configured
guest_config	JSONB, nullable	null = no guest step	configured = guest step appears
tier_config	JSONB, nullable	null = FIXED pricing	configured = tiered pricing engine
contract_template_id	FK, nullable	null = no contract step	configured = signature capture
deposit_config	JSONB, nullable	null = full payment	configured = deposit collected
intake_form_config	JSONB, nullable	null = no questionnaire	configured = form rendered
cancellation_policy	JSONB, nullable	null = free cancel 24h	configured = custom rules

Multi-Tenancy Architecture

Shared database with PostgreSQL Row-Level Security

IMPLEMENTATION

1. Resolve tenant from JWT claims or URL slug
2. NestJS middleware sets app.current_tenant on PostgreSQL session via SET LOCAL
3. Prisma Client Extension auto-filters all queries by tenant_id
4. RLS acts as database-level safety net -- even if app code has a bug, no data leaks

TENANT RESOLUTION BY CONTEXT

Admin CRM	JWT tenant_id claim
Client Portal	URL slug (/portal/{slug})
Booking Page	Read-only role; page slug
Embed Widget	Tenant slug via config
API / MCP	API key mapped to tenant_id

ACCEPTANCE CRITERIA

- Each business has isolated data (no cross-tenant leakage)
- Adding a tenant requires no developer intervention
- Single codebase, no per-tenant deployment
- Performance not degraded by other tenants' load
- Businesses can customize booking page (logo, colors, domain)

4

Booking & Payments

State machines, availability engine, and payment processing

Booking State Machine

6 states, strict transition rules, walk-in entry point

PENDING

CONFIRMED

IN_PROGRESS

COMPLETED

CANCELLED

NO_SHOW

WALK-IN ENTRY POINT

- Bypasses PENDING state entirely
- Enters CONFIRMED directly via Quick-Add
- Staff-initiated from Admin CRM calendar
- source = WALK_IN (always commission-free)
- No confirmation email (client is present)

CONFIRMATION MODES

AUTO_CONFIRM (default):
Payment succeeds > booking auto-confirmed

MANUAL_APPROVAL:
Payment collected > stays PENDING > staff confirms/rejects (48h timeout > auto-cancel + refund)

Availability Resolution Engine

6 layers evaluated in priority order -- zero-config needs only layers 1 and 5

Priority	Rule	Effect	Required?
1	availability_rules (recurring)	Defines open windows per day-of-week	Yes (preset creates defaults)
2	Buffer times (before/after)	Subtracts cleanup time from each slot	Only when non-zero
3	blocked_dates	One-off blocks (holidays, maintenance)	Only when rows exist
4	INBOUND calendar events	External events block overlapping slots	Only with FR-CAL-10
5	Existing bookings	CONFIRMED/IN_PROGRESS block their range	Always (core integrity)
6	Advance window	Rejects dates outside min..max range	Always (defaults 1-365 days)

PARALLEL-RUN BRIDGE (Layer 4)

Booksy > (one-way export) > Google Calendar < (two-way sync) > SavSpot

Booksy appointments appear as INBOUND calendar events in SavSpot, blocking those time slots. Clients see "Unavailable" with no distinction between SavSpot bookings and external blocks. 20-45 minute latency is acceptable for advance bookings.

Payment Processing

PaymentProvider abstraction -- provider-agnostic from day one

FEE STRUCTURE ($100 US BOOKING)

Stripe processing:	~$3.20 (2.9% + $0.30)
SavSpot platform fee:	$1.00 (1.0%)
Business receives:	~$95.80
Total effective rate:	~3.9% + $0.30

Referral commission (15-20% capped at $500)
applied ONLY on first platform-sourced booking

PAYMENT PROVIDER ROADMAP

Phase 1 — Stripe Connect Express
US, EU, UK, AU, CA, many more

Phase 3 — Adyen + PayPal Commerce
Extended global coverage

Phase 4 — Regional: GCash/Maya, Razorpay, Mollie
PH, India, EU regional

Always — Offline Payment (first-class)
Markets without online coverage

PAYMENT STATE MACHINE

From	To	Trigger
CREATED	PENDING > PROCESSING > SUCCEEDED	Normal payment flow
SUCCEEDED	PARTIALLY_REFUNDED / REFUNDED	Partial or full refund
SUCCEEDED	DISPUTED	Payment provider dispute webhook
PENDING / PROCESSING	FAILED	Timeout or provider failure

5

Data Model & APIs

40+ tables, comprehensive API surface, RBAC permissions

Data Model Overview

Tenant is root aggregate; booking is the central transaction entity

PLATFORM

- tenants
- users
- tenant_memberships
- team_invitations
- api_keys

BOOKING

- bookings
- booking_sessions
- booking_flows
- date_reservations
- booking_state_history

SERVICES

- services
- venues
- availability_rules
- blocked_dates
- service_categories
- service_providers
- service_addons

PAYMENTS

- payments
- invoices
- invoice_line_items
- payment_disputes
- payment_webhook_logs
- webhook_dead_letters
- discounts
- tax_rates

CLIENT

- client_profiles
- consent_records
- data_requests
- reviews

COMMS

- communications
- notifications
- browser_push_subscriptions
- calendar_connections
- calendar_events

OPERATIONS

- audit_logs
- support_tickets
- feedback
- import_jobs
- import_records
- referral_links

6

Communications, Security & Compliance

Email, SMS, push notifications, auth, GDPR, PCI DSS

Communications & Notifications

Phase 1 -- Transactional

- Email via Resend (platform templates)
- Booking confirmation
- Cancellation confirmation
- 24h reminder
- 24h follow-up + rebooking link
- Payment receipt
- Provider SMS via Twilio
- Browser push (Admin CRM)
- Morning summary SMS
- Weekly digest email

Phase 2+ -- Advanced

- Custom branded email templates
- Variable substitution UI (80+ vars)
- SMS to clients via Twilio
- In-app notifications (bell icon)
- Mobile push (Expo Push)
- Notification preferences per channel
- Delivery tracking (7 statuses)
- Quiet hours (per timezone)
- Digest batching (hourly/daily/weekly)

Infrastructure

- Circuit breaker (3-state per provider)
- 20 trigger events across 5 categories
- Workflow automations (preset defaults)
- Template sandboxing (no code injection)
- Bounce handling (hard/soft)
- CAN-SPAM/TCPA compliance
- Rate limiting on all channels
- Background jobs via BullMQ
- 13 context variable groups

Security & Compliance

Enterprise-grade security for a bootstrap-stage platform

Authentication

- JWT RS256 (15-min access, 7-day refresh)
- Google OAuth + Apple Sign-In
- API key auth (SHA-256 hashed)
- MFA via TOTP (Phase 2)
- Token blacklisting on logout (Redis)

Data Protection

- PostgreSQL RLS tenant isolation
- AES-256 encryption at rest for PII
- bcrypt (12 rounds) password hashing
- Prisma parameterized queries (no SQL injection)
- HSTS + TLS 1.3 only

Compliance

- GDPR: consent management, data export,right to erasure, DPA (Article 28)
- PCI DSS: provider-side tokenization (no card data on Savspot servers)
- CCPA: do not sell, right to know/delete
- WCAG 2.1 AA: all public pages
- CAN-SPAM/TCPA: opt-out mechanisms

Operations

- Audit logging (16 action types, 2yr retention)
- Breach response lifecycle (6 stages)
- Rate limiting (16 scopes)
- CSP headers + DOMPurify (XSS prevention)
- Dependency scanning (npm audit + Snyk)

AI-Powered Support & Development Pipeline

Three-tier AI system: Claude Code + Qwen3 (local) + Open Claw (24/7)

Complexity Tier

Claude Code

Cloud ($100/mo)

Complex architecture decisions, booking flow
engine, payment state machine, PR review, multi-file orchestration

Volume Tier

Qwen3 (128GB Local)

gmktec evo x2, zero marginal cost

CRUD scaffolding, Prisma migrations, React components, Zod schemas, test factories, documentation generation

Monitoring Tier

Open Claw

24/7 local, autonomous

CI monitoring, deployment health, error tracking triage, support ticket L1 resolution, development support

AI-POWERED SUPPORT TRIAGE PIPELINE

Step	Actor	Action
1. Classification	Open Claw	Classify severity (LOW/MED/HIGH/CRITICAL), match known patterns
2. Investigation	Qwen3 / Claude Code	Analyze against codebase, error logs, recent deployments
3. Resolution	Qwen3 / Claude Code	Auto-respond (AI_RESOLVED) or prepare fix for dev review
4. Escalation	Open Claw	Route unresolvable tickets to NEEDS_MANUAL_REVIEW + notify dev

7

Go-to-Market Strategy

Design partner program, concierge launch, distribution channels

Design Partner Program

Marcus (barber, 32) -- 90-day structured parallel-run with Booksy

PARTNERSHIP STRUCTURE

- Duration: 90 days (one quarter of signal)
- Route 3-5 real clients/week via SavSpot
- 10-minute weekly check-in (text/voice)
- Flag friction points in real-time

SavSpot commits:

- Import data before day one (clients, services)
- Respond to feedback within 24 hours
- Ship at least one fix per week from input
- Be transparent about what is not yet built

GOOGLE CALENDAR BRIDGE

Booksy > Google Calendar > SavSpot

1. Barber connects Google Calendar to both
2. Booksy exports appointments to GCal
3. SavSpot INBOUND sync picks up GCal events
4. SavSpot shows those slots as unavailable
5. SavSpot bookings sync to GCal (OUTBOUND)
6. Manual block in Booksy (closed ecosystem)

Latency: ~20-45 min (acceptable for advance bookings)
Double-booking risk window: minimal

SIGNAL COLLECTION FRAMEWORK

Phase	Indicator	What It Reveals
Weeks 1-4	Does he check SavSpot unprompted?	Engagement vs. obligation
Weeks 1-4	Does he route more than 3-5 clients?	Product excitement level
Weeks 4-8	Does he prefer SavSpot for any task?	Workflow replacement signal
Weeks 4-8	Does he share the link outside test group?	Organic virality
Weeks 8-12	"Would you cancel Booksy tomorrow?"	Product-market fit (the kill question)

Concierge Launch & Distribution Channels

The Collison installation model -- set up SavSpot for users on the spot

15-MINUTE DEMO + COLLISON INSTALLATION

Min 1-3:	Discovery -- "Walk me through how you handle bookings right now"
Min 3-10:	Show 2-3 features on THEIR phone using THEIR business data
Min 10-12:	The "aha" moment -- show one thing they can't do with current setup
Min 12-15:	"Want me to set this up now?" Then build profile, add services, generate link

POST-ONBOARDING NURTURE (FOUNDER = DRIP)

Day 1: "How did it go? Any clients book yet?"
Day 3: "Noticed you added 3 services -- looking good."
Day 7: "Any questions? How are clients reacting?"

DISTRIBUTION CHANNELS

Phase 1+ — **Organic Viral Loop**
Booking link = product impression. Every shared URL exposes SavSpot.

Post-Launch — **Competitor Comparison**
"SavSpot vs Booksy" with interactive cost calculator. High-intent SEO.

Ongoing — **Build-in-Public**
Two narratives: dev workflow (Twitter, HN) + user testimonials (Instagram).

Phase 3+ — **AI Agent Distribution**
MCP server + public API. Zero-marginal-cost channel. First-mover advantage.

Phase 4 — **Platform Directory**
Consumer marketplace. Gated on >200 businesses. Commission-eligible.

Soft Launch Cohort

5-10 businesses structured across greenfield and conversion personas

Slot	Type	Persona	What It Tests
1	Barber (design partner)	Marcus -- Booksy user	Parallel-run, import, calendar bridge
2-3	Other barbers (same shop)	Marcus variant	Multi-provider, land-and-expand
4-5	Different vertical	Maria / James	Cross-vertical, different platform import
6-7	Greenfield (no prior tool)	Priya -- first-time owner	Greenfield thesis, onboarding friction
8-10	Opportunistic	Mixed	Volume, diversity, unexpected use cases

SEGMENT SEQUENCING

Months 1-3

Independent Providers

Shortest sales cycle, strongest network overlap, lowest product complexity

Months 3-6

Multi-Provider Shops

Requires social proof from Segment 1; land-and-expand from Marcus's shop

Months 6+

Venue Businesses

Most complex use case; LifePlace proves tech supports this complexity

8

Roadmap & Validation

Four phases from foundation to scale

Development Roadmap

PHASE 1

Foundation

Months 1-2.5

- ✓ Multi-tenant platform with RLS
- ✓ Business-type preset onboarding
- ✓ Dynamic booking flow engine
- ✓ Stripe Connect via PaymentProvider
- ✓ Offline payment (first-class)
- ✓ Admin CRM + Client Portal
- ✓ Two-way calendar sync
- ✓ Walk-in booking, Provider SMS
- ✓ Browser push, AI support triage

PHASE 2

Comms & Growth

Months 2.5-4

- ✓ Mobile app (React Native + Expo)
- ✓ Subscription billing (Stripe)
- ✓ Email/SMS template engine
- ✓ Contracts + digital signatures
- ✓ Check-in/check-out management
- ✓ Reviews system
- ✓ Booking flow builder
- ✓ Embeddable widget (premium)
- ✓ Notification preferences

PHASE 3

AI & Automation

Months 4-6

- ✓ MCP server + public REST API
- ✓ Workflow automation builder
- ✓ Adyen + PayPal via abstraction
- ✓ Advanced analytics (premium)
- ✓ QuickBooks / Xero integration
- ✓ i18n + multi-currency
- ✓ Referral link management

PHASE 4

Scale

Demand-Driven

- ✓ AI recommendations
- ✓ Platform directory (>200 biz)
- ✓ Custom domains (>20 requests)
- ✓ Multi-location (>10 biz)
- ✓ Regional payment providers
- ✓ Partner program (>500 biz)
- ✓ Geographic expansion

Year 1 Success Metrics

1,000	10,000	$2M	$40K	>70%	>40
Registered Businesses	Monthly Active Bookings	Gross Merchandise Value (GMV)	Platform Revenue (base case)	90-Day Retention	Net Promoter Score (NPS)

BUSINESS OBJECTIVES

#	Objective	Target	Timeline
BO-1	Production-ready + soft launch	First booking from non-founder business	Month 3
BO-2	Vertical adoption	200+ businesses	Month 6
BO-3	Sustainable revenue	$8K+ MRR	Month 10
BO-4	AI-agent capability	1+ integration	Month 6
BO-5	International readiness	2+ countries	Month 8

NORTH STAR METRIC **Monthly Bookings Completed**

LEADING INDICATOR: Unprompted booking page sharing -- businesses putting savspot.co/{slug} in Instagram bio, email, or website without being asked

Prior Art & Validation

LifePlace -- production-deployed booking system by the same developer

LIFEPLACE (lifeplace.dev)

709	commits
122	database models
20	domain modules
~576K	lines of code

Django/Python backend | Fly.io + Cloudflare Pages
~80% domain overlap with SavSpot (full rewrite, not fork)

VALIDATION SCORECARD (v1.3)

Specification Quality	**5/5 stars**	9 docs, fully consistent
Technical Feasibility	**4.5/5 stars**	LifePlace proves capability
Market Analysis	**4/5 stars**	Solid research, some assumptions
Revenue Model	**4/5 stars**	Aligned incentives, realistic math
Distribution Strategy	**4/5 stars**	Formalized GTM, thin margin on contacts
AI-Agent Thesis	**3.5/5 stars**	Real trend, timing uncertain

KEY VALIDATION EVIDENCE

- ✓ LifePlace proves solo developer + AI can ship complex booking platforms (576K LOC in 6 months)
- ✓ Confirmed design partner (Marcus) with structured 90-day parallel-run engagement
- ✓ Revenue model achieves positive unit economics at ~$3K/month (modest scale, bootstrap-aligned)
- ✓ MCP ecosystem reached 97M+ monthly downloads; no booking SaaS competitor has shipped MCP server yet
- ✓ 5-10 reachable contacts in personal network align with soft launch cohort requirements
- ✓ LifePlace serves dual purpose: technical validation + distribution asset (social proof in outreach)

Risks & Mitigations

Risk	Likelihood	Mitigation
Crowded market	Medium	AI-first + universal engine; greenfield > conversion thesis
Slow adoption	Medium	Signal-first soft launch; organic viral loop; free + zero-friction
Solo bottleneck	Medium-Low	3-tier AI pipeline (Claude + Qwen3 + OpenClaw); LifePlace validates throughput
Support burden at scale	Medium	AI triage pipeline: >60% auto-resolution target; validated in LifePlace
Stripe Connect dependency	Low	PaymentProvider abstraction; Adyen/PayPal Phase 3; offline fallback
Greenfield thesis timing	Medium	Core product works for established businesses; greenfield is additive
New business mortality	Medium	No subscription to lose on churn; commission-only model absorbs it
Competing AI-native entrants	Medium	First-mover window; MCP-ready from Phase 1; speed to market is critical
Distribution gap	Medium	Addressed by GTM strategy; concierge launch; build-in-public

Onboarding Flow

Sign-up to working booking page in under 5 minutes

PHASE A -- REQUIRED (<5 MINUTES)

1. **Sign Up** — Email/password or Google OAuth
2. **Business Type** — VENUE | SALON | STUDIO | FITNESS PROFESSIONAL | OTHER (triggers preset defaults)
3. **Business Profile** — Name, description, logo
4. **First Service** — Name, duration, price (zero-config defaults from preset)

Booking page is now LIVE with preset defaults

PHASE B -- OPTIONAL (POST-SETUP)

- Customize availability hours (preset applied sensible defaults)
- Connect payment provider (Stripe Express; booking page works without)
- Advanced configuration (guest tracking, contracts, custom flow)
- Import client data (CLI Phase 1, self-service Phase 2)
- Connect Google Calendar (one-way or two-way sync)

BUSINESS-TYPE PRESET DEFAULTS

Category	Hours	Pricing	Confirm	Reminders
PROFESSIONAL	Mon-Fri 9-5	FIXED	Auto	24h reminder + 24h follow-up
SALON	Mon-Sat 9-6	FIXED	Auto	24h reminder + 24h follow-up
VENUE	7 days 8a-10p	FIXED	Manual	48h reminder + follow-up
FITNESS	Mon-Sun 6a-9p	FIXED	Auto	24h reminder + 24h follow-up

Non-Functional Requirements

Performance, scalability, reliability, and accessibility targets

Performance

- FCP < 2 seconds (booking pages)
- API p95: < 200ms reads, < 500ms writes
- Booking step transition < 300ms
- Search autocomplete < 500ms
- 10,000+ concurrent sessions

Scalability

- 10,000+ businesses on shared infra
- Horizontal read replicas (Fly.io)
- 1,000+ jobs/minute (BullMQ)
- Sub-second search across 100K+ listings

Reliability

- 99.5% monthly uptime (Phase 1)
- RTO < 1 hour | RPO < 1 hour
- MTTD < 5 minutes
- Daily DB backups (28-day retention)
- PITR via WAL replay (< 5 min granularity)

Accessibility

- WCAG 2.1 Level AA (all public pages)
- Full keyboard navigation
- Screen reader compatibility (ARIA)
- 4.5:1 contrast ratio (normal text)
- prefers-reduced-motion respected

SAVSPOT

"Find your spot. Book your moment."

The free booking platform that works for any business in under 5 minutes.
AI-agent ready. Universal. Outcome-aligned.

9	40+	100+	4	67M+
Specification Documents	Database Tables	Functional Requirements	Development Phases	Addressable Businesses

SD Solutions, LLC | Stephen DeSlate | March 2026
